PRODUCT OVERVIEW: 4900

A COMPLETE MONITORING SOLUTION FOR CEMS GAS ANALYSIS

For industries and processes including power generation, petrochemical, refining, waste incineration, iron and steel or cement manufacture, continuous emissions monitoring is a regulatory requirement. The solution must be capable of offering the highest sensitivity and accuracy when dealing with multiple measurements for pollutants and greenhouse gases. Certification to MCERTS/QAL1 is essential: added to this is the need to choose a flexible analyzer that can easily integrate into your existing infrastructure. No matter what your application needs, you'll want a solution that's easy to install and operate, while delivering attractive affordability. And we don't believe you should have to compromise.

A NO COMPROMISE SOLUTION

The 4900 meets all your CEMS requirements through a specific design and feature set optimized to continuous flue gas emissions monitoring applications. This compact, small-footprint analyzer integrates effortlessly into your established systems and, when used with the correct sampling system, delivers high grade MCERTS/QAL1 certified multi-gas monitoring of pollutant/greenhouse gases (% O₂ and ppm SO₂, SO, NO, CO, CH₄, and N₂O). The 4900 combines three sensitive and highly stable non-depleting technologies to deliver unsurpassed measurements you can rely on – Paramagnetic, SBSW IR and Gfx IR. In addition to its performance, the 4900 also comes with analog/serial outputs, with digital communications protocols (RS232/RS485 Modbus), for added flexibility in configuration and set-up.

SIMPLE MAINTENANCE AND REDUCED ONGOING COSTS

Added to its considerable measurement performance and stability, the 4900 delivers highly attractive cost reductions over product life. Not only is this device optimized for easy set-up and flexible integration, but an auto-calibration function permits easy, low-cost remote calibration.
